Model : No. 0286/IV/12

Kepler Space Telescope

Scale 1:48

This is a NASA spacecraft paper model, a space telescope, launched in 2009 with the solely mission is to help scientist to find habitable planets that are outside our solar system. Earth like planets that have been discovered so far are 77 planets. The templates consist of 4 pages of patterns, I use 1/48 scale on this model. That is a rough scale, it's not very accurate. You can display this model in two way by using display stand, first just like floating in space with high beam of suspender or on the ground. I made this model because Mars Curiosity model that I made have good feedback. This model also can be use as an educational tool.
